

Warp's FLEX-O-GLASS Greenhouse Films

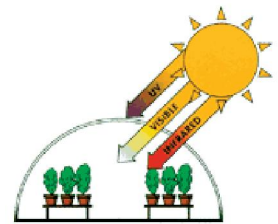

Since 1924, Warp Brothers has produced FLEX-O-GLASS, the **FIRST** flexible greenhouse covering material. During these past 90 years, Warp Brothers has continued to develop and manufacture films for the agricultural, horticultural and industrial markets to withstand tough outdoor environments.

Warp Brothers manufactures films used in agriculture, horticulture, and many other demanding applications that really put outdoor films to the test. In the process, we've learned quite a bit about making films that last longer. Today, we've used this experience to make Warp's FLEX-O-GLASS 4-Year Greenhouse Films the most durable covering for all your greenhouses.

Horticultural Products from Warp Brothers

- Warp's FLEX-O-GLASS Overwinter Clear and White Films
- Mulch Films
- Hydroponic Growing Film
- POLY-COVER® Agricultural films in Clear and Black Opaque

WARPS 4-YEAR FILM

Our Warp's FLEX-O-GLASS Greenhouse Film is anything but ordinary. It's a premium greenhouse film that's setting new standards for performance and durability under a variety of severe environmental conditions.

- More UV protection - means longer film life because it blocks harmful UV rays that can damage plastic...and your crop.
- Optimum light transmission - lets more direct growing light in, while keeping harmful UV rays out
- Special resins - keep it flexible in cold weather, yet stable under hot conditions.
- Stays cleaner - attracts less dust, washes off easily.

WARPS 4-YEAR IRCC FILM

For colder climates, choose our thermal UV Film with its advanced infrared additive package that helps you save energy and maintain a warmer environment to promote earlier, more rapid plant growth. Our Thermal Film also allows the highest level of diffused growing light. Plus, it offers high P.A.R. light transmission and contains condensate control additives

ALL PRODUCTS MADE IN THE USA
