**21.7% Ethephon**

Collate can be used to increase lateral branching in many popular ornamental varieties, including azaleas, chrysanthemums, geraniums, lantana, petunias and verbena. It is also ideal for controlling plant height and stem topple in daffodils and hyacinth, as well as delaying flowering in a wide range of ornamental crops. Ethephon, the active ingredient in Collate, has been a staple of ornamental production for years.
