

**Netafim™ Greenhouse, one of the world's leading greenhouse solution providers, has accrued vast global experience in providing highly specialized, state-of-the-art greenhouse systems, commercial greenhouses and greenhouse equipment.**

## HANGING BASKETS

Hanging Basket growers needing to reduce or eliminate their hand watering labor costs can install a Netafim SlimLine EZ Close™ system and expect a complete payback in the first season from labor cost savings

- One-hand, EZ close shut-off of individual baskets – prevents water and fertilizer spillage and waste
- Snag-free slim design for easy retrieval from plants at harvest – no more lost weights
- 94% flow uniformity – from the first basket to the last in any system

## BEDDING PLANTS

Netafim Sprinklers and Misters are the ideal irrigation solutions for your bedding plants. Our products produce unprecedented levels of watering uniformity with our traditional "strip of sprinklers" and side-by-side layout. These products were specifically designed and engineered with high quality plastics for durability and long-life.

- Drip-less Operation - constructed without a bridge, means no water dripping onto the plants below.
- Wider Patterns - a single line can be used where two were once necessary with a range up to 24 feet.
- Highly Durable - made from molded acid resistant plastic to prevent cracking from fertilizers and sprays.
- Instantaneous On-Off - the check valve assures that all Sprinklers and Misters start and stop simultaneously as well as eliminating drips onto the plants below after shut-down.

## PROPAGATION

With its consistent performance and superior humidification capabilities, the Netafim CoolNet Pro Fogger is the ideal solution for your humidifying and cooling propagation applications. An average particle size of 65 microns at 60 psi, results in quicker evaporation and higher humidity rates. This creates a zone of saturated humidity that is ideal for rooting.

- Simple, Tool-Free Disassembly - requires just a quick twist to remove the nozzles from the center assembly.
- Highly Durable - made from the highest quality UV white anti-acid plastics for reliability even with high calcium water.
- Instantaneous On-Off Check Valve - assures that all foggers start and stop simultaneously and eliminates drips onto the plants below after shut-down.

## NURSERY

With hand watering a thing of the past, Netafim Automated Systems take Nursery Container irrigation to the next level.

- [Non-Pressure Compensating Spray Stake](#) deliver a precise amount of water and fertilizer directly to the container. [Pressure Compensating Spray Stakes](#) provide improved water and fertilizer control as well as an efficient spray pattern that evenly wets the soil surface to maximize water retention.
- [Vibro-Spray High Flow Sprinkler](#) with its flat trajectory and large wind fighting particles results in fast uniform watering.
- [Space-It Dripline](#) is a labor saving drip system for watering potted plants. The dripline has a visible mark at the location of each dripper to save time during installation and reduce crop loss.
- [Driplines](#) have injected molded emitters requiring simple filtration, are portable for multi-year usage and eliminate plugging for problem free irrigation.
